As you look through the book, you will quickly see that this book's format is different from all other review and test preparation books. It's like having a professor sitting right next to you as you study. This book is specifically geared toward healthcare students and new healthcare professionals that are preparing to take the ACLS certification exam for the first time. This book will also give the seasoned healthcare professional lots of great review information as well as a way to update themselves on the latest research and guidelines. Whichever certifying agency's program you are taking, either in a classroom or on the internet, this book and its contents will help you succeed in this course. In this book we give you all the essential information that you will need to successfully pass the certification course and exam on your first attempt. Joe and I have been teaching this course to healthcare professionals and students since 1984. We know what works and what doesn't when it comes to helping our students be successful. We had to develop almost all of the study materials for our students by ourselves because very little existed at the time. The Zombie Notes Study Charts were some of the first study aids we developed to help our students learn a large amount of information very quickly. We know that this format works very well because hundreds of thousands of healthcare professionals and students, in hospitals and colleges all over the world, have used this handy, no-nonsense chart to help them successfully pass the ACLS certification exams. Therefore, in order for you to be successful on the certification exam, and on the job, we expect you to memorize every bit of information contained within the Zombie Notes Study Charts and within this book. It is essential that you know this information by heart and can recall it at a moment's notice. This information is not only essential for the exam, but for your career, and the survival of your patients, as well.

**Strategies to Improve Cardiac Arrest Survival** Institute of Medicine

2015-09-29 Cardiac arrest can strike a seemingly healthy individual of any

age, race, ethnicity, or gender at any time in any location, often without

warning. Cardiac arrest is the third leading cause of death in the United

States, following cancer and heart disease. Four out of five cardiac arrests

occur in the home, and more than 90 percent of individuals with cardiac

arrest die before reaching the hospital. First and foremost, cardiac arrest

treatment is a community issue - local resources and personnel must

provide appropriate, high-quality care to save the life of a community

member. Time between onset of arrest and provision of care is

fundamental, and shortening this time is one of the best ways to reduce

the risk of death and disability from cardiac arrest. Specific actions can be

implemented now to decrease this time, and recent advances in science

could lead to new discoveries in the causes of, and treatments for, cardiac

arrest. However, specific barriers must first be addressed. Strategies to

Improve Cardiac Arrest Survival examines the complete system of

response to cardiac arrest in the United States and identifies opportunities

within existing and new treatments, strategies, and research that promise

to improve the survival and recovery of patients. The recommendations of

Strategies to Improve Cardiac Arrest Survival provide high-priority actions

to advance the field as a whole. This report will help citizens, government

agencies, and private industry to improve health outcomes from sudden

cardiac arrest across the United States.
