sedation techniques designed to improve the patient's overall dental experience. The result is an indispensable book, expert in its professional protocols and techniques, and comprehensive in its wide-ranging considerations. Detailed chapters, divided into eight parts, are devoted to topics on: the problem of fear and anxiety in dentistry; pain and anxiety control; pharmacosedation; history and techniques of general anesthesia; inhalation and intravenous sedation, preparation and management of emergencies in the dental office; and sedation for special needs patients - pediatric, geriatric, and medical and physically compromised patients. Written by an acknowledged expert in the field, the book draws on a wealth of clinical experience and ability. Combines all aspects of sedation with essential theoretical and technical instruction. Techniques are divided into sections on pharmacology, armamentarium, and technique and complications - described in explicit detail that allows it to be used as a

chairside reference. Pharmacosedation is covered in full, with discussions of oral, rectal, and IM premedication, as well as nine chapters on inhalation sedation and ten chapters on IV sedation. Covers all of the components required by the ADA guidelines: review of cardiovascular and respiratory physiology; selection of agents; techniques of administration; and management of complications and emergencies. Step-by-step descriptions of inhalation sedation (nitrous oxide and oxygen) and intravenous sedation provide a superb clinical "picture" of the procedures. Chapters on pediatric, geriatric and physically and medically compromised patients offer valuable, up-to-date information on the management of these special needs patients. In-depth discussions of the pharmacology of commonly used sedative agents allow the reader to fully understand properties and characteristics of drugs used.
