Neurogenic Dysphagia Tobias Warnecke 2021-03-05 This book is a clinical manual that covers the whole spectrum of swallowing and its disorders. It starts with physiology of swallowing, pathophysiology of disordered deglutition, diagnostic methods (clinical and instrumental) and ends with an in-depth's and up-to-date presentation of current treatment options. The clinically most relevant topics of dysphagia management on the stroke unit and the intensive care unit are dealt with in separate chapters. Also the closely intertwined issue of nutritional

management is specifically addressed. Most importantly, the book covers all obligatory topics of the Flexible Endoscopic Evaluation of Swallowing (FEES)-curriculum, an educational initiative that started in Germany in 2014 and is currently being extended to other European and non-European countries. The book is richly illustrated and an online video section provides a number of typical patient cases. FEES is probably the most commonly chosen method for the objective assessment of swallowing and its disorders. It is used in stroke units, intensive care facilities, geriatric wards but also in rehabilitation clinics and within dedicated outpatient services. This book on neurogenic dysphagia therefore addresses a wide range of different medical disciplines, such as neurologists, geriatricians, intensive care physicians, rehabilitation physicians, gastroenterologists, otolaryngologists, phoniatrists and also speech-language pathologists.

Management of Swallowing and Feeding Disorders in Schools Emily M. Homer
2015-11-02 Management of Swallowing and Feeding Disorders in Schools examines the most significant issues in swallowing and feeding facing school-based speech-language pathologists (SLPs). Topics addressed are unique to the school setting, ranging from organizing a team

procedure in a district to serving children with complex medical issues, behavioral feeding disorders, and neurological feeding disorders. Ethical, legal, and cultural issues are also addressed. Many students in school districts across the country exhibit the signs and symptoms of dysphagia, and children who were originally treated for dysphagia in hospitals and other settings often begin attending public schools at three years old. The difficulty they had with swallowing and feeding frequently follows them to the school setting. Further, there are many students who develop swallowing and feeding disorders as a result of traumatic brain injury, neurological disorders and syndromes, behavioral disorders, and so forth. The range of students needing services for swallowing and feeding disorders in the school setting can be from three to twenty-two years of age and from mild dysphagia to tube feeding. The identification and treatment of swallowing and feeding disorders in schools is relatively new. There are still many districts in the country and internationally that do not address the needs of children with dysphagia. As school-based SLPs take on the challenge of this population there is a need for information that is current, accurate, and thorough. University programs include very little training, if any, at this time in the area of swallowing and feeding in the school setting. This text is appropriate for both a dysphagia course as well as courses that train SLP students to work with school-aged students.
