**Artificial Intelligence in Construction Engineering and Management** Limao Zhang 2021-06-18 This book highlights the latest technologies and applications of Artificial Intelligence (AI) in the domain of construction engineering and management. The construction industry worldwide has been a late bloomer to adopting digital technology, where construction projects are predominantly managed with a heavy reliance on the knowledge and experience of construction professionals. AI works by combining large amounts of data with fast, iterative processing, and intelligent algorithms (e.g., neural networks, process mining, and deep learning), allowing the computer to learn automatically from patterns or features in the data. It provides a wide range of solutions to address many challenging construction problems, such as knowledge discovery, risk estimates, root cause analysis, damage assessment and prediction, and defect detection. A tremendous transformation has taken place in the past years with the emerging applications of AI. This enables industrial participants to operate projects more efficiently and safely, not only increasing the automation and productivity in construction but also enhancing the competitiveness globally.

**Metaverse Made Easy** Dr.Liew Voon Kiong 2022-01-10 In recent months, the term metaverse has become the newest buzzword in the crypto and gaming space, and start-ups venturing into metaverse have been mushrooming around the globe. These start-ups were able to attract investments from angel investors and VCs. The biggest news this year was the direct listing of Roblox on the New York Stock Exchange in which the company's stock closed at \$69.50 per share, giving the company a market cap of \$38.26 billion. Another sensational story was Epic Games, the company that built Unreal Engine and the popular metaverse game Fortnite. At the time of writing, Epic Games has just completed a \$1 billion round of funding to support the long-term vision for the metaverse. But all these developments paled in comparison to Facebook changed its name to Meta on 29th Oct 2021, boldly announced its official entry into the metaverse. This was a game-changing milestone, which not only showed that Zuckerberg has continuously strengthened his worldview that "the metaverse is the next stop of the Internet", but also raised the metaverse to the same level of ambition as Musk's vision of colonizing Mars and Google's project to radically extend the human lifespan. Though metaverses have existed for more than two decades particularly in the gaming space like the famous Second Life, Fortnite, Roblox and more, it was neither widely known nor adopted outside the gaming industry. However, with the meteoric rise of the DeFi and NFT applications in the last two years, metaverse suddenly became a buzzword as metaverse platforms were mushrooming by integrating DeFi and NFT into GameFi to create sensational 3D VR experiences and allow users to monetize while playing (aka Play to Earn). Besides gaming, the latest trend shows that there is immense potential in business and commercial metaverse applications. Industries such as tourism, real estate, medicine, engineering, education, event management, manufacturing, town planning and more could benefit greatly from Metaverse. As Metaverse is evolving fast, I have written this book to help you gain a better understanding of the metaverse as well as how to invest in metaverse projects to gain profits from NFT trading, DeFi staking and Play to Earn.
