Pre-Incident Indicators of Terrorist Incidents Brent L. Smith 2011-01 This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

Food Quality and Safety Systems Food and Agriculture Organization of the United Nations 2003-06-30 One important element of FAO's work is building the capacity of food control personnel, including government authorities and food industry personnel carrying out food quality and safety assurance programmes. Such programmes should include specific food risk control procedures such as the Hazard Analysis and Critical Control Point (HACCP) system. The manual is structured to provide essential information in a standardized, logical and systematic manner while adhering to effective teaching and learning strategies. Also published in English, Russian and Spanish.
